

Brush & floss on the Go

Maintain your Teeth at ease

Total Convenience

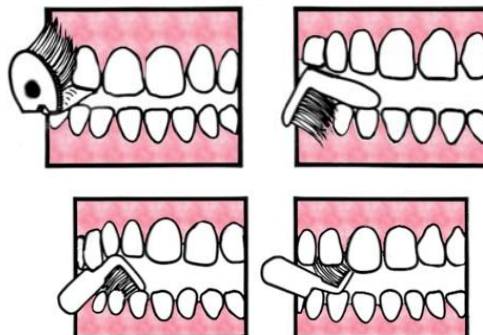

This toothbrush has been developed to brush teeth more often than we do on average. It was developed by a Dutch dentist who combined brushing teeth with pleasure to promote healthy long life-teeth. Young and old now use this brush for happy teeth.

Gingivitis

Various tests and studies indicated that gum infections will disappear due to improved blood flow by brushing and flossing. Daily gentle gum massage will prevent development of gingivitis.

No water required

This new "chewing-gum-brush" does not require your hands or water. It can be chewed like chewing GUM and because of the Xylitol and the minty taste, the production of saliva is increased, which prevents a dry mouth and dry gums.

The Advantages:

- "Gingivitis" is mainly caused by a combination of insufficient brushing and flossing resulting in poor blood flow to the gums.
- Infected gums can be the cause of reduced general health.
- The Brush & Floss cleans teeth and massages the gums, activates blood flow.
- It's very pleasant to do. (Such as chewing a chewing-gum)
- Brush & Floss helps to keep your teeth white, and helps prevent gingivitis. Results are noticeable within days.
- After the first time use your teeth feel great, and your dental-hygienist will notice the difference of your care.
- Happy Chewing.
